Arborist Pro Climbing Rope from PELICAN ROPE

Tight Spliced Eye

The Arborist Pro is a unique hand-spliced 24 strand rescue rope, designed for use in both MRS and SRT climbing systems. The professional arborist line looks great, provides easy knotability, and zero milking. The bright colors of the rope ensure excellent visibility. As a high-performance climbing line, it runs smoothly over sheaves and through gear, this results in faster ascending and finer control while descending.

The double-ply braid features abrasion and chemical resistant polyester cover over a strong nylon. The polyester cover provides excellent UV protection, high-abrasion resistance, and unmatched durability. The nylon core holds better and creates stronger knots, due to its stretch and texture.

Heavy Duty Belts Reinforced with Aramid Fiber - RED

Our Belts are made with high-strength Aramid fiber cords for heavy duty applications and severe duty cycles. These belts have a "drier" cover fabric that was designed to increase flexibility and withstand severe clutching action, bending or twisting, heavy loads and back-side idler applications. Oil and heat resistant. Individually sleeved with dimensions in inches and millimeters. Available in 3/8", 1/2" and 5/8" widths.

Lawnmower safety starts with help from Shriners Hospitals

The snow has melted and soon enough, the long blades of grass underneath will need to be cut.

To ensure a safe lawnmowing experience, Shriners Hospitals for Children suggest that safety precautions be carefully followed. Shriners Hospitals treat many children each year who have been seriously injured as a result of power lawnmower accidents. Many of these incidents result in the loss of fingers, toes, limbs and even eyes. Tragically, some lawnmower accidents can result in permanent brain damage or even death.

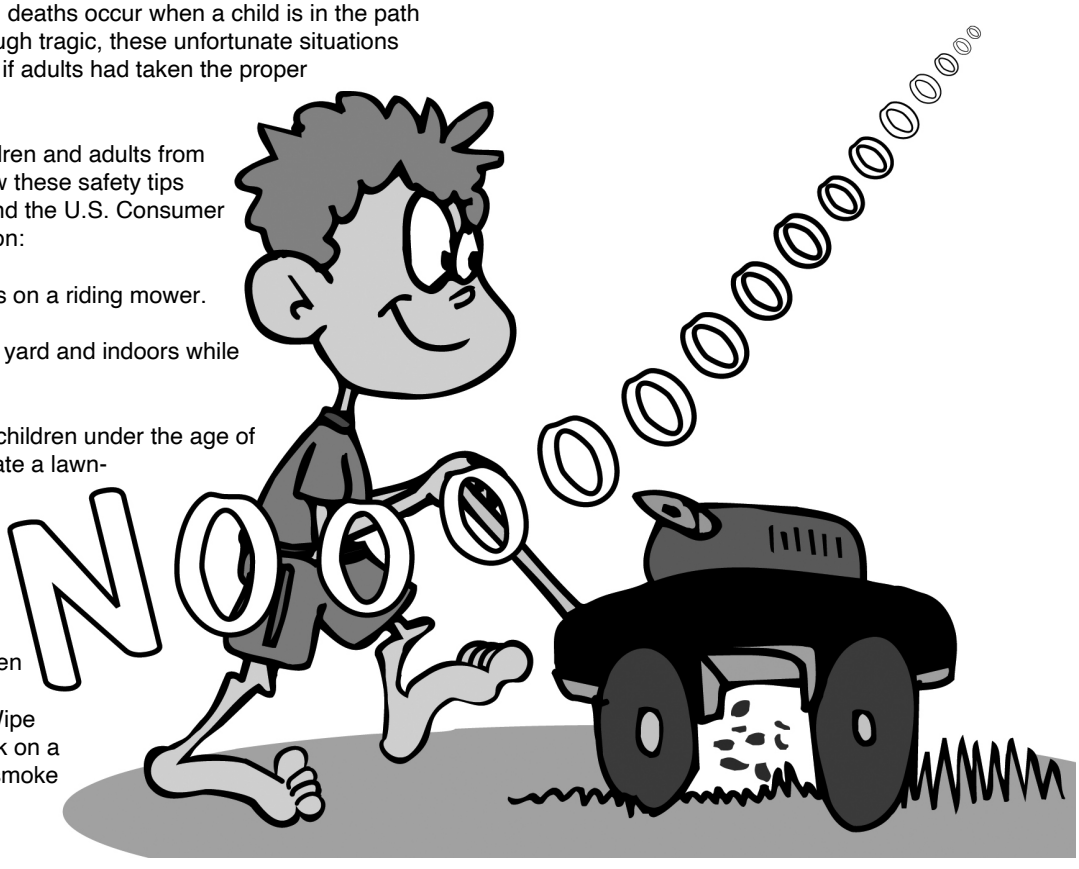

In 2001, about 275,000 people were treated in hospital emergency rooms for injuries related to lawn and garden tools, and about 35,000 of those injured were under 15 years of age.

According to the U.S. Consumer Product Safely Commission, each year about 75 people are killed and about 20,000 are injured on or near riding lawnmowers and garden tractors. One out of every five deaths involves a child. The Commission estimates that most of the deaths occur when a child is in the path of a moving mower. Although tragic, these unfortunate situations could have been avoided, if adults had taken the proper precautions.

To prevent injuries to children and adults from lawnmowers, please follow these safety tips from Shriners Hospitals and the U.S. Consumer Product Safety Commission:

- Do not allow passengers on a riding mower.
- Keep children out of the yard and indoors while mowing the lawn.
- It is recommended that children under the age of 14 not be allowed to operate a lawnmower.
- Always prepare your lawn for mowing. Check your lawn for items such as sticks, rocks, toys, etc. Make sure nothing is hidden in the grass.
- Handle fuel with care. Wipe up spills. Never fill the tank on a mower that is hot. Never smoke or use any kind of flame around gasoline.
- Wear appropriate clothing and shoes. Wear long pants, long-sleeved shirts, eye protection and heavy gloves. Wear sturdy, closed-toe shoes with slip-resistant rubber soles.
- Check guards and shields. Be sure to read the owner's manual and know how to operate the equipment. Don't remove or disable guards or other safety devices.
- Use a mower with a automatic blade cut-off. Stay behind the handle until the blade stops. Never reach under a mower while it is still operating. If you need to remove debris or check the blade, disconnect the wire from the spark plug.
- Don't cut grass when it's wet.
- On slopes, mow up and down rather than across the slope.

For more information on lawnmower safety, or Shriners' network of hospitals that treat children with orthopedic problems, burns and spinal cord injuries, please write to Shriners International Headquarters, Public Relations Dept., 2900 Rocky Point Drive, Tampa, FL 33607, or visit our Web site a www.shrinershq.org. If you know a child Shriners can help call 1-800-237-5055 in the United States or 1-800-361-7256 in Canada. Shriners Hospitals provide free treatment to children under the age of 18 without regard to race, religion or relationship to a Shriner.

Tire Bead Lube

Order No. 32 - 12975
Tire bead lube. Delta first bead lube concentrate is probably the slipperiest in the industry. The turquoise colored concentrate can be mixed 3 to 1 with tap water to make an efficient and economical mounting lube. It's much slicker than mounting paste and allows tires to easily slide and get the bead properly mounted on the rim. Also contains a rust-inhibitor package that will not allow rust to form on the rim. Its entirely non-toxic, odorless, and environmentally friendly. 4 per case. Concentrate 1 gallon.

Charges batteries in cold climates, rescues drained batteries and provides maintenance charging to increase battery life. A versatile battery charger that provides charging modes for both large and small batteries from 1.2 -120Ah such as lawn mowers, cars, RV's boats, and trucks as well as for motorcycles, ATV's, Jet Skis or snowmobiles. Genius 5 is similar to the G3500, just better. Its 34% smaller and delivers 65% more power. Its the all-in-one solution battery charger, battery maintainer, trickle charger plus battery desulfator. Designed for 6-volt and 12 volt lead acid automotive, marine, and deep cycle batteries including flooded, gel, AGM and maintenance free, plus lithium-ion batteries. An integrated thermal sensor detects the ambient temperature and alters the charge to eliminate over charging in hot climates and under charging in cold climates. Charges batteries as low as 1-volt. Or use the all-new force mode that allows you to take control and manually begin charging dead batteries down to zero volts. Automatically detects battery sulfation and acid stratification to restore lost battery performance for stronger engine starts and extended battery life. 110 volts, US Plug-In adapter only.

TYPES AND USES OF CHAIN SAW CHAIN

The fundamental difference in these types of cutters are a rounded corner on the semi chisel and a square corner on the full chisel. The rounded corner provides a slightly smoother less aggressive cut while the square corner is all about getting the job done by cutting more aggressive chucks as it eats through whatever wood you're cutting.

SHARPENING CHAIN SAW CHAIN

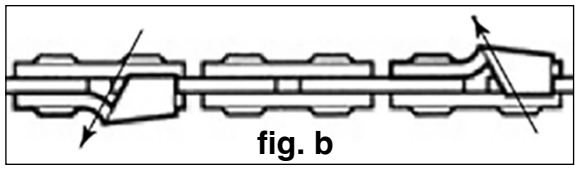

Chain Sizes: File Sizes:

1/4 = 5/32 file, 3/8 LP = 5/32 file, .325 = 3/16 file, 3/8 Standard = 7/32 file

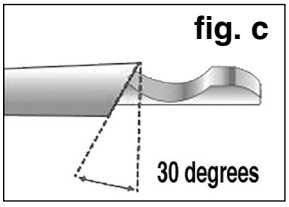

Sharpening of Chain saw chain has a few basic instructions in order to be successful

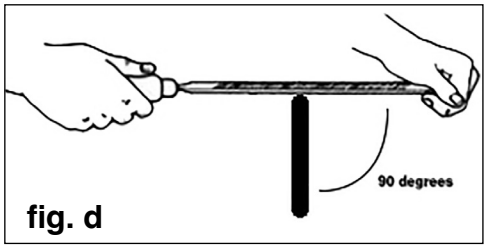

- Choose the correct size file for the chain
- Place the file inside the cutter tooth as pictured **(fig. a)**. The top of the file should arch above the cutter tooth when positioned correctly.

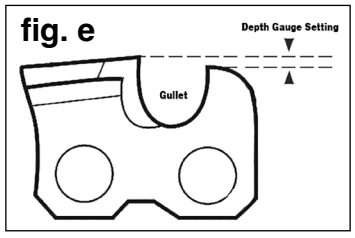

- Only file in one direction starting from the inside of the cutter tooth pushing the file outward in one motion. **(fig. b)**
- File at the correct angle, this angle will usually be about 30 degrees. The top plate of the cutter tooth as shown in **(fig. c)** will give you the correct angle.

- Be sure to file the chain from a 90 degree angle from the bar. Do not file the cutter downward or upward only straight through in the same direction of the cutter tooth. **(fig. d)**

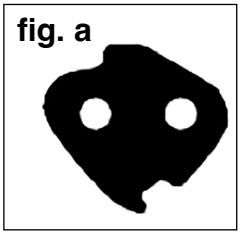

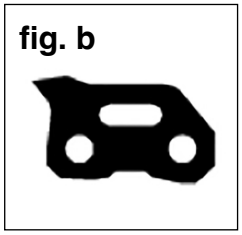

- Use a flat file to file any imperfections off the cutter tooth depth gauge. Shown in the picture on the left **(fig. e)** the depth gauge is at the front of the cutter controlling the depth of the cutter tooth.

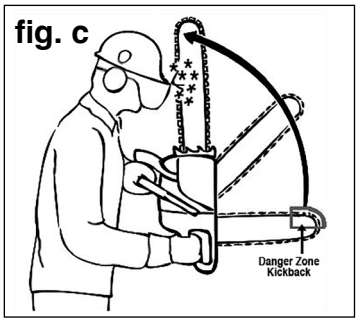

SAFETY LINKS

There are two basic types of safety links. These safety links may vary a little in shape, but all serve the same purpose. Bumper safety links **(fig. a)** are recognized by the small fin that is visible on the top side of a drive link. While the Guard links **(fig. b)** are recognized on the tie strap and will also have a small fin on the top/side of the strap. Both serve the same purpose in reducing kickback **(fig. c)** and making it more safe for the operator. The kickback zone is outlined at the tip of the bar.

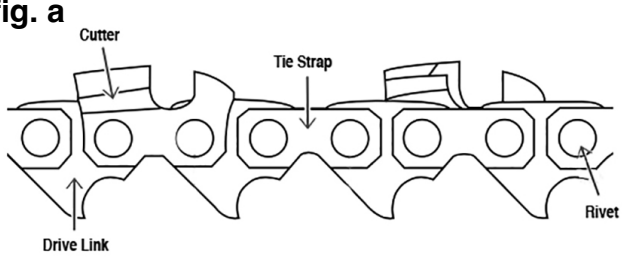

PARTS AND FUNCTION OF CHAIN SAW CHAIN

Chain saw chain has four basic parts that are common and consistent throughout the chain saw world. In the picture on the left **(fig. a)** you see these four basic parts. The Cutter, Drive Link, Tie Strap and Rivet make up a chain saw chain. These function are listed below.

fig. a

- **Drive Link:** This is the portion of the chain that is turned by the chain saw sprocket and allows the chain to move and be guided by the groove in the bar.

- **Tie Strap:** The tie strap is actually made up of two components the plain strap and preset strap. These straps along with the rivets are what connect the cutter and drive links together.

- **Rivet:** This is simply the round pin like item that holds everything together and is built into the preset strap.

- **Cutter:** This is the portion of the chain that is raised above the rest of the chain. There are several different styles of cutters. They all have the same fundamental designs as listed in the picture **(fig. b)**

GAUGE MEASUREMENT OF CHAIN SAW CHAIN AND BAR

There are two different gauge measurements that you need to know when looking for your bar and chain. Pictured below **(fig. a)** is a drive link and a reference to how the gauge is determined. The thickness of the drive link will determine the gauge of chain you have. Also shown **(fig. b)** is a bar groove where the chain rides on, in the bar. This is where you will find the bar gauge. Here are some quick references you can use when determining the gauge you need. **(fig.c)**

HOW TO MEASURE CHAIN PITCH

The pitch of the chain is the distance between the drive links. To determine the pitch you simply measure the distance from one rivet on the drive link to the same rivet on the adjacent drive link. As shown on the right **(fig.a)** you measure the distance between three rivets and divide by two. That will give the pitch.

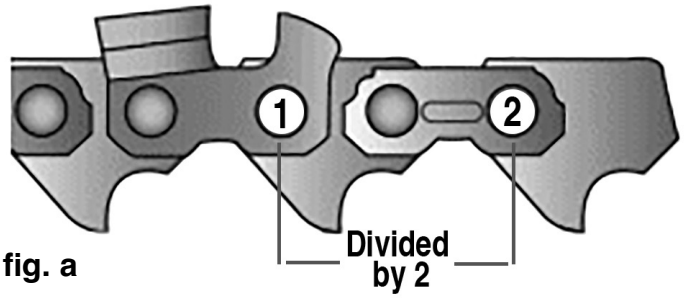

fig. a

Example: If the distance between rivet 1 and rivet 2 is 3/4". Divided 3/4" by 2 = 3/8"

Rotary has four different pitches of chain: 1/4, 3/8 Low Profile, 3/8, .325. The difference between 3/8 Low Profile and 3/8 Standard is simply the cutters. The drive links and straps are all larger, but the distance between rivets are the same.

IDENTIFYING TYPES OF CHAIN SAW BARS

Rotary has three types of Chain saw bars. The bar type can be identified using the Rotary part number from the bar. The third number from the end of the Rotary part number identifies the bar style. (See chart below)

- **Bar Style 1:** This bar is for the consumer and can visually be identified by only having one rivet at the end of the bar where the bar sprocket is located.
- **Bar Style 3:** This bar is a Prosumer bar and is designed more for commercial use. This bar can be identified by having multiple rivets at the end of the bar where the bar sprocket is located.
- **Bar Style 5:** This bar has a replaceable sprocket tip and is for commercial use. The image below is a replaceable sprocket tip for a style 5 bar. If you will notice there are multiple rivets in the tip. This information will now be easy to identify the bar style both visually and by part number.

Mounting Pattern	Pitch	Gauge	Bar Style	Bar Length
1 = A041	1 = 3/8" Low Profile	1 = .043	1 = Consumer	The last two digits in the number are the length of the bar. In the example above it is 18" in length.
2 = A074	2 = .325"	2 = .050	3 = Prosumer	
3 = A218	3 = 3/8" Standard	3 = .058	5 = Pro Sprocket

8 = D176				

ROTARY CHAIN SAW BAR AND CHAIN CHART

The Rotary chain saw bar and chain chart is formatted across two pages for each model listing as shown below. To quickly identify the bar and chain needed for an application by model follow the steps listed below.

A. This is the section where the model of the saw should be identified. Once identified move to section B.

B. Identify the length, gauge, pitch, drive link count and bar style needed for the application in this section. In most cases as long as the length, pitch and gauge are identified correctly the drive links will also be correct. Bar style is simply based off of preference or use of the saw. Once the length, pitch and gauge are identified follow the chart on the same line to section C.

C. This section will give the part number to the bar needed for the model saw you have, now that the you have determined the line to follow across the chart in section B. Now follow that line across the page to section D.

D. This section you will fine the part number to the "Consumer" (chain with bumber or guard links) chain that will fit the saw and bar you have selected.

E. Following the same line across the page this section you will fine the "Prosumer" (chain without bumber or guard links) chain part number that will fit the saw and bar you have selected.

F. This section will give you the part number to a bar and chain combo if there is one available. Remember this must be on the same line you followed across the pages starting in section B.

SNOWBLOWER REPLACEMENT PARTS

Replacement Paddle Fasteners and Scraper Bolts

Order No.	Description	
41 - **5517**	Bolt (Scraper)	MIN 010
41 - **5518**	Nut (Scraper)	MIN 010
41 - **5519**	Fastener (Paddle)	MIN 010

Fasteners (Toro & Jacobsen only)

Toro—Paddles have 7 fasteners on each (14 fasteners per machine). Scraper has 3 bolts and 3 nuts each.

Jacobsen—Paddles have 6 fasteners each (12 fasteners per machine). Scraper has 3 bolts and 3 nuts each.

Note: Paddle fasteners—Should be replaced when paddles are replaced. Our fasteners are the next size larger and help prevent backing out because of repeated removal and assembly.

Scraper bolts—Are a button head allowing the user to insert an allen wrench and thus remove more easily. Generally, the nut and bolt rust together and have to be cut apart.

Both the paddle fastener and the scraper bolt will have a pre-applied adhesive to help prevent loosening due to vibration.

16 Strand Arborist Rope from PELICAN ROPE

This high-strength composite climbing rope features a tough 16 strand braided chemical resistant polyester cover over a non-rotational nylon parallel core. This construction results in a smooth running rope ensuring fewer snags and minimal abrasion. Its 16 strand weave is steam set which helps to eliminate cover over core slippage.

Arborist Pro Climbing Rope from PELICAN ROPE

The Arborist Pro is a unique hand-spliced 24 strand rescue rope, designed for use in both MRS and SRT climbing systems. The professional arborist line looks great, provides easy knotability, and zero milking. The bright colors of the rope ensure excellent visibility. As a high-performance climbing line, it runs smoothly over sheaves and through gear, this results in faster ascending and finer control while descending.

The double-ply braid features abrasion and chemical resistant polyester cover over a strong nylon. The polyester cover provides excellent UV protection, high-abrasion resistance, and unmatched durability. The nylon core holds better and creates stronger knots, due to its stretch and texture.

Trimmer Adjustable Lanyard from KONG

The Trimmer adjustable lanyard is for use in work positioning systems, in conjunction with a fall arrest device. It enables quick and accurate length adjustment, allowing optimal work station positioning.

Main features:

•Fitted with a device for progressive length adjustment for the optimal work position.

•It can be used on the harness lateral attachment points to distribute the load of an upright user: the length is adjusted by pressing the ergonomic lever.

•You can use the single ventral attachment point of the harness to distribute the load between the belt and the leg loops of the suspended user.

•Fitted with a sliding protective sheath to protect the rope from contact points that could damage it.

•Available in different lengths.

PUTTING IT TOGETHER

Customize Poles and Accessories

- Choose your tool head (pruner, pole saw or accessory)
- Attach tool head to pole's female ferrule with adapter
- For additional length, attach extension pole(s)

For highest performance and safety, we recommend using a Base Pole when using one pole or starting with a Base Pole when working with multiple poles.

SAW HEAD POLE
With male ferrule and permanently mounted saw head for attaching saw blade

EXTENSION POLE
With male & female ferrules for additional length

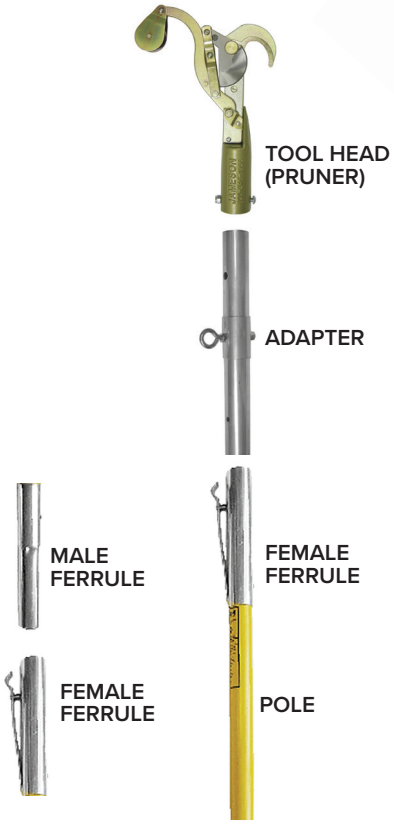

BASE POLE
With rubber end cap and female ferrule provides solid foundation

POLE CONFIGURATIONS

BASE POLE - we recommend starting with a Base Pole.

Extension Pole provides additional length, extending workable height.

Saw Head Pole is for use with Saw Blade.

ADAPTER & FERRULE SYSTEM

Makes it easy to change from pruner head to pole saw head or pole lengths of 4' to 12'. An exterior leaf spring locking button on ferrule offers a strong connection, whether attaching poles or tool heads.

This versatility saves time and money in the field.

SAW HEAD POLE SET UP

Use saw blade with Saw Head Pole or use Pole Saw Head with Extension Pole.

We recommend using Saw Head Poles with Base Poles.
